Continuation of 11. does NOT place the application in condition for allowance because: Applicant contends that the rationale for 103 motivation utilizing Couillard et al. is vague and therefore lacks obviousness. Examiner submits, however, that the 103 rationale for using Couillard et al, namely "to form a functionalized group for further reaction in forming conventional siloxanes" is a valid 103 rationale since having functionalized ligands in the silicon base atom would enable one of ordinary skill to further react other silicon-based moieties to form a practitioner-discretioned thickness of conventional siloxane. Without functionalized ligands, no further reactions may continue which would render the structure unreactive to forming practitioner-discretioned siloxanes and therefore limits flexibility of the user in the art. Applicant further contends that platinum is no a catalyst for condensations reactions. Examiner, however, posits that absent evidence that states such an assertion, platinum is a well-known and conventional catalyst which is utilized for many reactions including condensation reactions. Platinum in itself can be known as a condensation reaction apart from the use disclosed by Hohle et al. In essence, claim 2, for example, merely recites "a condensation catalyst", and does not mention its intended purpose which would have narrowed the use of platinum.

/N. Drew Richards/ Supervisory Patent Examiner, Art Unit 2895
